From The Beating End of the Stethoscope

The installation of Dr. David Denker as President of New York Medical College on November 17, 1967, was highlighted by the reading of "From The Beating End of The Stethoscope" by poet and critic John Ciardi.

Invited by occasion to say what I can toward a ceremony of anatomical man, I think to lift the colors of his skin.
Red and blue rivers flowing out and in are the curriculum knitted to his heart.
Man is a system time can take apart, or second year students. What can put him back inside himself and on the spinning track of the idea he thinks he is in space and in or out of nature?

In this case, as nature is the doctor's friend, assume he is no more than method can exhume layer by layer, probe by probe — a dermatologist's specimen named Job, a self-inflicted wound named Oedipus, a liver case signed in "Prometheus."

What is their difference from the red and blue cross-tinted network almost visible through the skin they move in into hell or hope?
I speak from the heart end of the stethoscope and pulse back to what hears the problematic pumping I somehow feel stays enigmatic even when you have solved it.

Solve it well.
I hope my plumbing will not soon rebel against your government. Yet let me praise medicine most by what it cannot raise (or lower) to certainty. What men explore is never all, but always only more.

When I have fallen to your chart — and through it to the autopsy that will say "I knew it! This proves the case!" — when, unimproved but solved, I am an involved statistic uninvolved, I'll have no thanks left for how well you tried the brilliant surgery of which I died; but solved and certain and half way to hell, I'd say — if I had anything left to tell — "What left me still uncertain left me well."

I speak, as I say, the patient's point of view. But, given time, doctors are patients, too — and there's our bond: beyond anatomy or in it, through it, to the mystery medicine takes the pulse of and lets go forever unexplained. It's art, we know, not science at the heart. Doctor be whole.
I won't insist the patient is a soul, but he's a something, possibly laughable or possibly sublime, but not quite graphable, not quite containable on a bed chart.
Where science touches man it turns to art.

Doubt with me as exactly as you can that skinless red-blue anatomical man is an unceremonial bag of fact, and we may praise precision in the act of doubting it precisely.

Then as resident precisionist of doubt and your new president, I give you David Denker, my good friend, and yours in service to the doubtful end of all that men do well by trying better.
I grant he isn't much as a bone-setter, but if you'll fit the splints he'll fit the case to the dimension of whatever race we're trying to be human in, in the void.
He knows what's human and what's humanoid. He knows his ignorance and won't ignore it. He knows his cause. Today he stands before it in plumage that has yet to take effect.
In time enough it will. Though I suspect the plumage is a symptom, not a source.
Stripped down to business clothes, he's a work horse.

Now let art guide him and let science shoe him. I say you're wise to hitch your wagon to him.

John Ciardi

51 Book Reviews
How can our medical college best meet the challenges and opportunities that lie before it? What are the optimum conditions for the education of physicians and the pursuit of research? What innovations should be made in the curricula? What physical facilities are needed? What kind of training and orientation will help our graduates keep pace with the exponential growth of knowledge? How can we help to assure the delivery of health care services efficiently, wisely, and compassionately?

Beginning with this issue of *The Chironian*, I would like to share with you some of our thoughts on these questions and tell you what steps we are taking to strengthen the College and build for the future.

In our planning we recognize that our most important resources are people. We need dedicated, talented, and enthusiastic men and women. We need a strong, competent faculty, the highest caliber student, an able and dynamic administrative staff, an active Board of Trustees, and interested and articulate alumni.

In order to provide an atmosphere in which such individuals can work harmoniously and productively and in which teaching, research, and service can go forward on the highest levels, we are initiating changes in several areas of our college life.

We are concentrating first on the major long-range goals of the College. Committees of the faculty are making recommendations on such basic matters as the curriculum, student participation...
in decision-making, the relationship of the students to the faculty and the administration, the relationship of the college to other educational institutions, and the methods by which we can best fulfill our responsibility for the delivery of personal health care services. In the spring a number of faculty members will join the administrative officers and members of the Board of Trustees of the College in a three-day retreat to be held in upstate New York for the exchange of views on some of the key issues confronting medical education in general and New York Medical College specifically.

**Changes in Curriculum**

Several significant curriculum changes have already been made; for example, the Senior internship has been abolished and a traditional internship program is now being offered, the number of didactic exercises in the Junior and Senior years has been cut in half, and an elective summer research program has been initiated and has been well received by both students and faculty.

**Selection of Students**

The Admission Committee, which has met once each week during this busy season, has elevated standards for admission to the College and is particularly gratified by the large number of well-qualified applicants who are seeking admission to the Class of 1972. The Committee is making use of a computer to help screen applicants and has made the selection procedures more objective in other ways.

**New Administrative and Faculty Appointments**

We are strengthening our already distinguished ranks by a number of new appointments on the administrative and faculty levels. The appointments of Dr. J. Frederick Eagle as dean and professor of pediatrics, and of Dr. Jane C. Wright as associate dean and professor of surgery have already been announced in *The Chironian*. Cyrus E. Brush, a former vice president of the Abex Corporation, has assumed the post of vice president and business manager. Dr. Mark Lyons Peisch, formerly director of admissions and financial aid for the Graduate Faculties of Columbia University, has been appointed an associate dean (see page 19). The new post of director of construction and planning is held by Gerlandino Agro, who came here from Rensselaer Polytechnic Institute. As resident engineer at RPI, Mr. Agro directed and managed the extensive program of the Institute for the expansion of its physical plant. Mr. William C. Hilles, formerly business
The manager of the Rutgers Medical School, has been appointed executive assistant to the president.

In the last half of 1967 eleven men and women were appointed to the faculty as associate or full professors, including two new chairmen. Dr. Sidney Shulman, a noted immunologist and immunochemist, has been appointed professor and chairman of the Department of Microbiology, effective January 1, and Dr. Richard M. Friedenberg will join the faculty July 1 as professor and chairman of the Department of Radiology. He is now associate clinical professor of radiology at Albert Einstein College of Medicine and director and chairman of the Department of Radiology, The Bronx-Lebanon Hospital Center. A search committee headed by Dr. George Nagamatsu is seeking a chairman for the Department of Anesthesiology.

New Trustees Elected

Four new members, including the first woman to hold that post, were elected to the Board of Trustees of the college during the last quarter of 1967. They are Dr. Martha Lucas Pate, well-known educator and administrator; Dr. Arthur M. Sackler, physician, businessman, research scientist, and internationally known art collector; William H. Clark, head of one of the major management consulting firms operating in the United States and Europe; and William Ruder, president of Ruder & Finn, Incorporated, one of the world’s largest public relations counseling firms.

Faculty Tenure

As part of our effort to build a faculty second to none in excellence, we are establishing a tenure program applicable to various faculty ranks. The Board of Trustees has approved the program in principle, and the Board, the administration, and members of the faculty are now putting the governing policy in final form.

Control of Private Practice

A Control of Private Practice program has been approved by the Board of Trustees and will be implemented as soon as all the details of the conditions under which full-time faculty members may teach and provide medical services to patients have been worked out. Such a program, also known as a medical service plan, if carefully designed and wisely executed, ensures the ability of the College to offer a balanced educational program and gives fair and reasonable consideration to the interests of the College, the
faculty, the students, and all the groups involved in medical education and health care delivery.

It sets ground rules for the College and faculty and enables the faculty to fulfill their commitments to teaching, research, and medical service. It provides favorable income opportunities for the faculty, enhances the reputation of a hospital, and facilitates budget planning, budgetary control, and coordination of all activities of a college.

In our designing of a suitable medical service plan for New York Medical College, we are keeping in mind the words of the AAMC report, “A Study of Medical College Costs”: “Every new problem calls for a new plan. Every new plan calls for a look at both sides of the coin, an honest and penetrating appraisal of the overall situation, and a forthright statement of what is right.” We intend to design an equitable medical service plan, one which will fulfill satisfactorily the requirements of the College, the faculty, the students, and those in need of health care.

New benefits programs have been added as part of our plan to make the College an optimum environment for work in the medical profession. We believe that the new full-time faculty benefits program compares favorably with that offered by similar institutions. Briefly, it includes a T.I.A.A. contribution by the institution equal to approximately ten per cent of the participant’s salary. It includes also a major medical program, Blue Cross, a disability insurance program, and a generous life insurance and travel insurance plan, all financed by the institution. Additional life insurance is available on a contributory basis. It includes a tuition allowance for each child of a full-time faculty member enrolled in a college degree program. We are also planning to establish a sabbatical program.

For non-faculty people (other than those who are members of a union program) we will provide benefits giving them the maximum security that the institution is financially able to provide. Foremost among these benefits is a non-contributory pension plan, paid for by the institution, which will provide employees who have been continuously employed by the institution for five years or more with a pension on their retirement. This plan will be funded year by year on an actuarial basis, and it provides that a member's benefits become vested in him after ten years of service and attaining age 55. In addition, we are providing employees with Blue Cross benefits, a disability plan, improved group life insur-
The Expansion of Physical Facilities

New York Medical College, now 108 years old and one of the largest medical schools in the country, began with a faculty of eight men and a student body of fifty-nine. Classes, as most of you know, were held in a building on the corner of 20th Street and Third Avenue.

Since its founding the College has changed its location several times. Each move has resulted in increased as well as improved facilities. Now once more the constantly increasing need for additional space is confronting us, and the Board of Trustees and the Administration are exploring and examining the several choices open to us at this point in our history.

For example, we have been invited by the leaders of Westchester County to consider relocating in Westchester and establishing a university medical center in conjunction with Grasslands Hospital in Valhalla. As a result of this invitation, the College joined with the County in retaining Heald, Hobson, and Associates to undertake a study of the feasibility of such a move. The conclusion reached by the study was that such a move would be feasible providing more than $40,000,000 could be raised from corporate and private sources in Westchester. The most serious problem cited was the lack of sufficient beds in obstetrics and probably in pediatrics to support a medical school. Among the advantages to the College in relocating, the report on the study cited the almost unlimited space on the Grasslands site. The report also stated: "The resources for construction and operation of a new medical center in Westchester are potentially greater than for expansion and reconstruction of the present medical center in Manhattan. The opportunity to plan and build a completely new medical center during the present period of innovation and experiment in medical education could well result in an imaginative new program in Westchester."

The City of New York, through Mayor Lindsay and officials of the Health Services Administration, has indicated an interest in having New York Medical College relocate to Queens as the nucleus of a proposed Queens Medical Center. The City has been discussing its plans for establishing a major medical center in the
vicinity of Queens General Hospital and Triborough Hospital. The center would be part of the City's overall plan to establish regional health centers designed to render comprehensive community health services. Essential to such a center is the location there of a medical college, a teaching hospital, and all the ancillary facilities required for a modern integrated medical center.

It is interesting to note that of the five boroughs Manhattan is the home of five medical colleges, the Bronx and Brooklyn have one each, and Queens, with a population of almost two million, and Richmond have none. The potentialities in Queens are very interesting, and we are studying all aspects of the proposal carefully.

Leaders in Bergen County, New Jersey, have also asked the College to consider relocation in the County, pointing out that the population, resources, hospitals, and land are adequate for the needs of a medical school. In addition, there exists a strong possibility of university affiliation in Bergen County.

In our present location we have developed strong ties with our surrounding community. We have developed major health care programs and have a deep feeling of commitment to and an abiding interest in our immediate community. Because of this, we have been thoroughly exploring the possibility of remaining and rebuilding where we are. It should be emphasized that at this writing (January, 1968) no decision as to where New York Medical College will build for the future has been made either formally or informally. When we have thoroughly explored all the possibilities open to us, we will come to a decision regarding our future plans as rapidly as possible.

If we do decide to change our location, it will be several years before the move can take place, and in the interim we shall take care to insure the continuance and improvement of the health care services we now offer the community.

**University Affiliation**

An important consideration in our plans for the future is the possibility of university affiliation, since it is abundantly clear that communication among disciplines is becoming more and more imperative. A university provides the most possibilities for interrelated studies and creative scholarship, and both medical school and university benefit from the increased opportunities for cross-fertilization.

University affiliation in conjunction with the extensive expansion of our facilities may prove to be the quickest route to the bright future we all envision for New York Medical College.
The Medical Revolution and the Alarming Doctor Shortage:

CULTURAL CRISES OF OUR TIME

Installation Address by
Dr. David Denker
President, New York Medical College

We are all accustomed to thinking of our time as the age of science; we glory in the description. There is an intoxication about the speed of our progress. These are visibly times of greatness in both physical and theoretical achievement. In all the sciences, and nowhere more clearly so than in the medical sciences, the inconceivable is conceived, the unthinkable thought, the undoable done. The human dimension has never before been so enormous, and the catalog of human resources so nearly infinite. After thousands of years of bare subsistence, the human race is on the eve of abundance for everybody.

If the pursuit of happiness is so clearly at the point of capture, why are we so deeply troubled? A sense of crisis is discernible on every hand; as we feel it in ourselves, we see it in our arts and our letters, we hear it on the lips of friends and of strangers. We live uneasily with ourselves even as we contemplate the promise of ease for everybody.

The scientist shares the common human awareness of a crisis at hand. He is the principal architect of the accelerating changes which characterize our progress. More than most of his fellow men, the scientist is anxiously aware of the growing discrepancy between the achievements of his research and technology and their application to human life. Society is clearly failing to make a satisfactory use of its own new resources. There is a widening disparity between what actually is accomplished and what could be done. In medicine, indeed in all the scientific disciplines, this discrepancy has created an "expectation gap," a sense of the insupportable difference between what a man or woman can reasonable aspire to these days and what that man or woman actually does receive.

The crisis of today is not one of knowledge. It is a crisis of responsibility and of social philosophy, a crisis stigmatized by inadequacy and unavailability.

(continued on page 14)
The convocation for the installation of Dr. David Denker as President of New York Medical College was held Friday, November 17, at the New York Academy of Medicine.

An audience of 700, including representatives of the faculty, alumni and student body, as well as representatives of other academic institutions, civic and governmental groups, attended the ceremonies.

Greetings were offered to Dr. Denker by members of the College family, the academic community, and the East Harlem community.

Paul N. Ylvisaker, Commissioner of the New Jersey Department of Community Affairs, delivered the convocation address.

Ralph L. Tompkins, vice chairman of the College's Board of Trustees, introduced the speakers and Charles D. Halsey, Chairman Emeritus of the Board, conferred honorary degrees on Jonas N. Muller, Professor and Chairman of the College's Department of Preventive Medicine; Jackson E. Spears, Chairman of the Board of Trustees; and Mr. Ylvisaker.

Dr. Muller was awarded the degree of Doctor of Science honoris causa, and was cited for his scholarship and dedication to education, his commitment to the best possible health care for all, and his deep and abiding humanity. “As an outstanding participant in the fields of preventive medicine and public health, Jonas Norman Muller, you have given generously of your deep knowledge and wisdom to all academic issues and to the improvement of the care of the needy and chronically ill,” the citation stated. “Always courageous in upholding the best interests of the College, you have been extraordinarily sensitive to the needs of individual students and have given of yourself unstintingly to them.”

Jackson E. Spears received the Degree of Doctor of Humane Letters in recognition of his “selfless commitment to the betterment of the human condition.” The award stated that “As a student of foreign policy you have been a forceful and effective worker for the

(continued on page 12)
advancement of international understanding. You have brought dynamic leadership to the improvement of the quality of medical education and have been in the forefront of creative planning for the delivery of optimum medical care."

Paul N. Ylvisaker was awarded the degree of Doctor of Humane Letters in recognition of his "outstanding contributions to knowledge and your distinguished services in the public interest." Mr. Ylvisaker was cited as "one of the most creative spokesmen for the ancient dream of a rich urban culture," and as "the architect and director of strong new programs through which men of vision and heart are seeking to re-create in freedom and justice the central cities of the nation.

In his convocation address, Mr. Ylvisaker discussed many of the problems that have come with the increasing affluence and complexity of American society, and described the role he believed the medical profession must play in the cities of the future.

Mr. Ylvisaker called for an increased involvement of the medical profession in the complexity of urban life, and an active participation in the planning of the cities of the future. He told the audience that they must not escape into their guild, their standard of excellence, or into what they could do for their own convenience or comfort: "The prospect of having to mix in community affairs may seem dismal to our more timid souls," he said. "But this is where the action is. This is where the real learning is taking place and this is where you are going to get the excitement of this generation."

"The building and the rebuilding in our country and the world of our communities, is now to become the nation's and the world's biggest business," he continued. "One of the biggest parts in that business is going to be health care and therefore the role of medicine. As medicine inherits this role, it also acquires a far more direct and demanding responsibility for community well being. Medicine, in short, is now going to have to mix with the community of which it is a part. There can be no escape into the safe corners of professional convenience or carefully chosen markets or academic towers. There is no longer
stitution. For the performance of this task we expect from you sir, every hour of your waking day and an occasional sleepless night. May God guide you and give you strength.”

Dr. J. Frederick Eagle, Dean and executive vice president, said in his greetings from the faculty, “You have accepted this responsibility at a crucial time when the medical profession appears to have lost its role as a leader and an innovator of new and imaginative ideas for providing better and more medical education and better and more delivery of health care to the American people. . . . It would seem important that your new regime should make every effort to identify the medical needs of our society and the social forces that cannot fail but to influence us; and at the same time to reorganize our thinking so that we can be flexible and ready to respond appropriately to these forces. Such leadership will have the fullest support of this faculty and we look forward to working with you.”

On behalf of the Alumni body, Dr. Bernard J. Wattiker ’44, President of the Association, told Dr. Denker that “As alumni, our primary concern must always be for the College. Our loyalty must be constructive and clear sighted. Our vision of the future unobstructed by our personal interpretations of the past . . . We are proud that a man of Dr. Denker’s stature and capabilities has chosen to invest his own future with that of this institution . . . We will extend our every effort in any area that he may deem necessary, for the good of the institution of which we are all a part. To the College we offer our strong and abiding loyalty, our pride in its name and in its contribution to the profession which it serves. Most of all, we offer our deepest hopes for the continual reaffirmation of the spirit of this day.”

The ceremonies at the Academy of Medicine were followed by a reception and luncheon at the Delmonico Hotel, at which Dean J. Frederick Eagle presided. Speakers for the occasion were Dr. Mason W. Gross, President of Rutgers—the State University of New Jersey, and Reuben A. Holden, Secretary of Yale University. An album of greetings from other academic institutions was presented to Dr. Denker by Dr. Homer D. Babidge, President of the University of Connecticut.

In the evening, a dinner-dance in honor of President Denker and Dean Eagle was held in the New York Hilton.

The Convocation Committee was composed of Dr. Lawrence B. Slobody ’36, chairman, Dr. Francis D. Speer, assistant chairman, Dean Eagle, and the departmental chairmen. Jackson E. Spears, Dr. Slobody, and Mrs. Samuel L. Scher were co-chairmen of the dinner-dance.
What we have is in short supply, and too few of us can get at it. We are crowding ourselves away from our own banquet table. A world confronted by an exploding population is further confounded by a second crisis of scientists in shortage. Central to this scientist shortage is the massive doctor deficit.

These are our times, and the problems of today are our own present problems. Their scope tomorrow, and the magnitude of the changes beyond tomorrow, are enough to challenge the strongest hearts among us. It takes no genius to recognize that a problem now exists. The most cursory glance into the next decade discloses that the dimensions of our present problems are expanding, not contracting. It takes a kind of courage to risk even a brief look forward to what magnitude our present problems may be expected to have in the year 2000. Yet, if we do not attempt to do so, we fail all our present and future responsibilities.

New York Medical College is part of the world of medicine. This world is a complex, many faceted one. It is a world of students and of teachers; a world of practice and of research; a world of local community and of city; a world of the United States and the larger world of all nations. These worlds are closely linked and growing so rapidly that they tend to disrupt our supporting structures. Like a living organism, tissues must always change and always be renewed. In the years ahead, the evolution of our adaptive structures must proceed with greater rapidity. Only so can we assure emergence of the new forms essential to the health and survival of the whole of our human enterprise.

What does this mean to New York Medical College? Certain perspectives into future time may provide some insights. The class which graduates this year will be practicing medicine in the year 2000. The men and women trained today will also be teaching and researching in the year 2000. So, the facilities we build tomorrow must be relevant to the year 2000 and to an estimated population of 6 billion 400 million.

What is the nature of the crisis in medicine today? In America, at the beginning of this century, medicine faced the problem of quality. The American Medical Association, the Flexner report, and the academic community mobilized to establish standards and goals which made possible a solution to the problem of quality. The consequence of those conjoint actions, long ago, and in the setting of the industrial and scientific revolutions was to shift the leadership in medicine from Europe to this continent. By midcentury, the world of medicine, participating in the revolution of science, crossed the threshold of what we like to think of as the "age of science."

These very recent events are creating a constellation of new opportunities and dilemmas for medicine. We are beginning to understand that today quality medicine and quality medical practice, and even quality medical care, cannot be equated with the pressures that have evoked that quality. Of course, the need demanded quality first, and quality can never be adulterated. But today we are beginning to perceive that quality itself is partly defined by social accessibility. Quality medical care demands quality medical practice in quantity adequate to meet the needs of the community—the needs of the community—the needs of individuals—the needs of society. Socially adequate medical care is not possible with only one Cushing per one hundred thousand population.

Today, in this nation of affluence, there is a great and growing doctor deficit. Already alarming in scope, it threatens to reach disastrous proportions. Figures can be misleading. In the United States, the ratio of physicians per 100,000 population was 132.4 in 1957, 132.9 in 1960 and 132.8 in 1965. The United States Public Health Service projects 130.5 for 1970 and 125.9 for 1975.1 But these figures, deceptively close to each other, do not reflect the realities of our widening doctor deficit. Medical manpower adequacy cannot be appraised by such simplistic statistics as the number of MDs qualified to practice, or numbers of medical students graduating. Teaching, research, administration and other nonpractice medical pursuits are drawing more and more physicians out of practice. And shifts in practice are radically changing the availability of different types of medical services.

The concerned observer cannot simply calculate physicians per 100,000 population and make "medical care" sense. For one thing, specialization corrupts the gross statistics. The number of patients seen by a psychiatrist is but a fraction of those seen by a general practitioner; the number of patients seen by a cardiac surgeon is but a fraction of those seen by a pediatrician. The distribution shift among physicians is away from those areas in which large numbers of patients are treated into specialties in which the patient load per physician, per day or per year, is smaller.

Further, it is not possible to equate the medical needs of 100,000 people in 1980 with the same needs back in 1960 or 1930 and still retain significance as to medical services available. Among many reasons, a single example will serve: the differences in social demand caused by changes in distribution of age groups. Alas, the seventh decade of life requires half again as many doctor visits as does the third decade.2

One cannot even equate the needs of an average

person of a given age in 1980 to 1960 and to 1930 because increasing income, particularly that available for medical care, will multiply individual demands for medical services. For example, in 1930 the average United States citizen saw a physician two or three times a year. This rose to four and a half times a year by 1964.\(^3\) Consider the effect of Medicare and Medicaid, and of the additional billions being poured into medical care by government. The coming of age of pension plans, insurance programs, and the other growing marginal benefits of employment will add further to demand for more doctors and medical services.

But that is not all. The advancing technology of medicine brings into the area of hopeful therapy people who were previously incurable but who can now be salvaged to society. Thus, our planning for the future must accommodate the increasing manpower needs of the advancing technologies of medicine. The challenge calls for earnest and sobering thought. Consider the sheer physical installation and, ultimately, the maintenance requirements when organ replacement becomes more feasible and when organ prosthesis becomes a functioning reality. But there is more than medical logistics involved. What about the moral and philosophic training that will be needed for physicians who, in a most direct and urgent sense, may have to decide “who shall live and who shall die.”

Thus far, I have been speaking about the doctor deficit generally. Next, let us briefly examine the situation in our hospitals. In September, 1965 about 13,000 internships were offered. Of these, 7,309 were filled by the graduates of United States medical schools, 3,284 (almost one out of four) were vacant and 2,361 were filled by foreign graduates.\(^4\) In the same year about 39,000 residencies were offered of which 22,765 were filled by United States and Canadian graduates, 9,000 by foreign graduates and 7,000 (almost one out of three) remained vacant.

To examine the significance of these figures, let us compare college and medical school enrollment. Between 1959 and 1965 there was a 22.3% increase in college enrollment and a less than 7% increase in medical school enrollment. In the next ten years a further increase of about 65% is anticipated in college enrollment. Thus, from 1959-60 to 1974-75 the increase in the U.S. college enrollment is projected at 100% whereas even if we succeeded in completing a total of 120 new medical schools in the United States and Canada, the most optimistic projection in medical school graduates for both countries is an increase of less than 30%.

The U.S. Public Health Service further estimates that by 1975 there will be 3.2 medical school applicants per acceptance as compared to 1.8 in 1958-59. This suggests that our doctor deficit will not result from lack of available or qualified young men and women interested in medicine but rather a deficiency in those of us who are responsible for the numbers of men admitted at each medical school and the number of medical schools in the country.

Why should the United States be lagging behind ten other countries? We have the world’s highest per capita disposable income, and a corresponding demand for medical care and specialization. Yet, accor-

\(\text{(continued on page 16)}\)
ing to the World Health Organization, our ratio is one doctor per 720 people. Israel has one physician to 418 people; Argentina one for 670. I have suggested that the United States might achieve a ratio much better than one doctor to 720 people. Suppose we did. No nation is an island entire unto itself. There is a world beyond our national borders, a world that sometimes looks to us for leadership and help. Consider some of the following doctor ratios—Albania with one doctor for 2,300 individuals: Turkey with one doctor for 3,200 people; Algeria, one for 8,500 people; Cambodia with one for 20,000 individuals; Vietnam with one doctor for 28,835 individuals and Laos with one for 56,600 people.\(^9\) There are some small nations with ratios of one physician to 90,000 to 100,000 people.

What do these disparities mean to us, here and now? One fact about them is ironic. The poorest nations, those in greatest need, are losing their already woefully inadequate number of scientists, specialists, doctors and technicians to wealthier lands, including our own. Developed nations have been minimizing the effects of their own professional shortages by recruitment which exacerbates the shortages of the less developed and underdeveloped nations. In the light of our own professions to the world, surely we should be maximizing our training and reordering our training structures, not merely to meet the needs of American science and society, but to assuage, rather than aggravate, the scientific manpower shortages of less fortunate societies.

India, with a physician ratio of one to 5,800 people is today being drained by the United Kingdom with one physician for 840. We in turn drain the United Kingdom. Whereas we should be proudly exporting our medical skills and talents to Latin America, Africa and Asia, we are instead siphoning their sorely needed doctors into our medical economy. In effect, poorly developed countries are today subsidizing our medical manpower pool. Ostensibly we help train physicians from other countries, but this is now almost more pretense than reality. Still more questionable, the training we give foreign doctors and medical students is more applicable to our own medical problems, and our own system of medical care, than it is related to the problems and needs of their native lands. So, often it all ends up with the foreign physicians never returning to their native lands, but staying on in our comparatively affluent medical economy. This is not good. It is not healthy. It is not right.

Consider the sad sequences of the medical “brain drain.” The United States drains England, and England drains India, Pakistan and other commonwealth countries. In France there are as many Togolese doctors teaching and practicing as there are in Togo. And in Iran the situation is even worse. There are more American-trained Iranian doctors in New York than in Iran.\(^5\)

Here in our nation, and even in the microcosm of our immediate community, there is a similarity to the world as a whole. The underprivileged of America, as in the case of the underdeveloped countries, have more and more difficulty in competing for the limited amount of medical care available. Physicians are moving out of rural areas into large population centers. There is a polarization of physicians away from rural areas into urban centers, and away from the economically distressed and toward those of us who are able to pay for medical care.

Coming developments will have a most significant bearing upon the financial, the manpower, and the political structures of American society. A recent conservative projection\(^6\) placed public and private health care expenditures at about $130 billion by 1975. A more realistic figure, projected by one specialist,\(^7\) integrating the effects of some of the aforementioned factors, could raise medical care costs to between $150 and $175 billion in less than ten years. This is a significant part of the anticipated gross national product in the same period. In fact, at a GNP rate of growth of 3%, it could be as much as one-fifth or one-sixth of the gross national product in 1975. Since automation cannot save as much manpower in services as in mass production, it is probable that by 1975 one out of every five or six people will be engaged in health-service industries and professions. By the turn of the century, however, as many as one out of each three or four employed persons could be engaged in health-service industries and professions. The implications of such developments are staggering, not only in terms of the technical manpower needs these demands will create, but also in terms of the effect on our political structure. You will readily understand why we must immediately address ourselves to all aspects of our doctor deficit and our scientist shortage. Medical care is today not a privilege but a public right.

This then is the disquieting question: how do we deal with a shortage of doctors that has reached alarming proportions at home and abroad? The rational answer is that we and all medical institutions have the obligation to increase the total number of doctors at least 100% and to make available much higher proportions of medical personnel to countries which sorely lack doctors. Here at New York Medical College we will begin to revise our philosophies and policies to contend with a changing world. Excellence of instruc-

\(^{1967-1968}\)
tion and emphasis on research, community service, and freedom for personal growth are all parts of our program. My own experience suggests to me that there is no substitute for excellence, but the quality of our performance and our facilities must advance at a pace to match the serious manpower problem. The doubling of our enrollment is essential in this process.

We must also face the fact that, among other reforms, we shall have to reorient the curriculum in our school to turn out graduates who will be equipped and trained to work in the countries where they must work.

Anxiety and frustration are enemies of a sound and developing mind. A medical student from an underdeveloped country who is trained in the United States in diagnostic techniques will not be prepared for the conditions he finds when he is sent back home. New York Medical College will establish programs abroad to reorient medical students, particularly in the less developed countries. We would hope also to help them work closely with their colleagues at home to produce more medical students.

These are some of the challenges we hope to meet, these are the outlines of some possible approaches to those challenges. In furthering those approaches, it is the role of the President to act as an educator and an administrator. Speaking personally, I welcome the challenges, and I welcome the opportunities they present us with. Speaking for all of us, new colleagues and old friends alike, we foresee a future full of hard work, progress, and enough success to make the century-old venture of this institution a significant part of the whole human adventure into tomorrow.

We pledge New York Medical College to the health of man—not one man, not one race of man, and not one nation of man, but to all mankind.
FEEDBACK, the student newspaper of New York Medical College, (there are only eight other papers published by students at American medical schools), reports the activities and opinions of the student body. In the interests of keeping present and past alumni abreast of what the future alumni are doing and thinking, the CHIRONIAN presents the following FEEDBACK digest.

The editors of the student paper are Bruce Eissner '69, and Robert Ferrell '70.

Conrad Miller, '71 described the first student-organized orientation program conducted in the history of the College. The two-day program which took place early in September included opening addresses by Dr. Denker and Dr. Eagle, a Clinical Case Presentation by Dr. Rachmiel Levine, Professor and Chairman of the Department of Medicine, guided tours of the College and Metropolitan Hospital, an Informal Discussion of Student Experiences conducted by the upperclassmen, and an Introductory Lecture to Anatomy from Dr. Johannes A. G. Rhodin, Professor and Chairman of the Department of Anatomy.

Said Mr. Miller, "Helpful upperclassmen, knowing of the problems of adjusting to the atmosphere of work, work, work in medical school, attempted to ease the mind of the 'nervous Freshman' by relating critiques of various texts, studying habits, and course administration to anxiously listening ears . . . In general, the program accomplished its task of informing the Freshman of what was to happen to him in his immediate future at NYMC. In addition, the student met his classmates and his professors. A word of thanks should be his reply, and a continuance of the program in the future should be his goal."

"The most recent evidence of the awakening student at NYMC is a pilot study in community involvement," writes Robert Ferrell '70. "A program devised in collaboration with the Division of Community Mental Health of the Psychiatry Department will take a group of freshmen medical students into community agency activities in East Harlem and Yorkville.

"Student interest in relating medicine to the community reflects the general feeling of urgency in the health profession sciences that students be exposed to the field situation as a learning experience. The literature evidences a sense of 'cautious revolution' in terms of increasing attention to the training of personnel and the delivery of health care. Perhaps the most important concepts being discussed today in this regard are those of comprehensive health care and community medicine.

"Medical students at NYMC do not get any introduction to community medicine aside from a third-year rotation through preventive medicine in which the socio-environmental problems of health and disease are studied by home visits in East Harlem. Desiring earlier involvement, however, these students will be assigned to three agencies, the East Harlem Tenants' Council, the Isaacs House Project, and Metro North, a neighborhood action group. Their projects will be designed as they become more involved in agency functions.

"The students will make home visits and function as patient advocates to secure medical care and/or information when possible. Weekly seminars with faculty and agency staff will complement the field placement in order to focus attention on such issues as the life stresses in an urban environment, the problems of being a 'service recipient,' the meaning of comprehensive health care, and such others that provoke discussion," Mr. Ferrell concluded.

* * *

Last spring the class of 1970 devised a questionnaire with the intent of reinforcing areas of strength and focusing upon areas of inadequacy in the freshman curriculum. Reporting on the results of this student poll were Dolores Arnold, Kenneth Miller, and Robert Ferrell, all of the class of '70.

"The eleven sections in the questionnaire examined general teaching approach, evaluated the courses and the faculty, analyzed textbooks used, and rated some departments' laboratory exercises.

"In the general evaluation section the students expressed a desire for presentation of more clinical material (75%). They would like professors to have specified office hours in order to facilitate communication (76%). Prototype examination questions should be posted before exams (86%), and answers posted after all exams (89%). Of seventy-five respondents on one question, 76% favored the formation of a small group tutorial system to increase student discussion
and participation with faculty. Tutorial and preceptor programs have been introduced into several medical curricula with varying degrees of success.

“In anatomy the students desired more audiovisual material relating to the dissection or showing of anatomical defects (80%), and visits to autopsies and operations (72%).

“In reviewing the histology course students approved of the projection of slides as a preview to the laboratory (97%); preferred the use of student microscopes for lab practical examinations (90%); and desired demonstration slides on pathological materials (68%).

“Students thought the neuroanatomy lab sessions were of little value. Suggestions for improvement were to spend some of the time in conferences at Met, to provide a schedule of materials covered in each lab session in advance, and to have thorough lab slide previews.

“In reviewing physiology the students thought a series of lecture outlines would be helpful (90%). Laboratory exercises and post-lab conferences were considered ineffective (70%). Fewer lab sessions, more library time, and pre-lab conferences of objectives were considered as beneficial changes. The use of short quizzes was considered helpful (90%), although the purely multiple choice type examination should be modified to include essays (75%).

“IT is apparent that many issues remain to be considered by this year’s freshman class,” the article concluded. “The cooperation fostered between faculty and students by this evaluation should be a stimulus to further joint effort to improve our educational process.”

During the fall semester a questionnaire was distributed by members of the FEEDBACK staff to the students, faculty, and attending staff of the College, and Flower and Metropolitan Hospitals. William Carroll ’70 reported.

“The questions involve three current controversies which someday may alter both the role and the ethics of the medical profession — abortion, euthanasia, and the ‘fee for service’ system. The simple yes-no balloting system obviously does not plumb the wide spectrum of responses on any of these issues. More sophisticated survey techniques are needed before any legitimate conclusions can be made about a consensus within our medical community. But, a consensus was not our objective. Our motive was to pique further discussion and consideration of these questions . . . Of the 700 members of our medical community invited to express their opinions, approximately 45% of the students, and 25% of the faculty responded. All responses are anonymous.”

Listed below are the questions as well as the responses, in percentages, of the 241 students and 72 faculty and staff members who participated in the poll.

“Initially,” Mr. Carroll said, “we were somewhat awed by the lack of a majority opinion and the possible inconsistencies in the responses to the questions. This may be attributable to an ambiguity in the questions themselves. More importantly, though, indecision and inconsistency have always marked transitional periods.”
As announced in the "Report from the College President," four new members, including the first woman to hold that post, were elected to the Board of Trustees of the College during the last quarter of 1967. They are Dr. Martha Lucas Pate, Dr. Arthur Sackler, William H. Clark, and William Ruder.

Dr. Pate, who holds a Ph.D. from the University of London, is former President and professor of philosophy at Sweet Briar College. She is currently chairman of the College and School Division of the United Negro College Fund and a Board member of several organizations, including the Foreign Policy Association, the Fund for Education on World Order, Recording for the Blind, Goucher College, and Pierce College in Greece. She has served, too, as official United States delegate to UNESCO conferences, including the University Preparatory Conference at Utrecht in 1948 and the Fourth General Conference in Paris in 1949. She also served on the First National Selection Committee for Fulbright Scholarships. Dr. Pate is the widow of Maurice Pate, who was the "architect and builder" of UNICEF and director from its beginning in 1946 to his death in 1965.

Dr. Arthur M. Sackler, physician, businessmen, research scientist, and internationally known art collector, is chairman of the board of William Douglas McAdams, president of Medical Radio and Television Institute, Inc., and heads other organizations in the field of medical communications. He is also chairman of the Development Committee of Columbia University's Advisory Council for Art History and Archeology. Dr. Sackler received the M.D. from the School of Medicine of New York University in 1937, and has published more than eighty papers on his research in psychiatry, endocrinology, and physiology. The Metropolitan Museum of Art recognized his distinction as a collector when it named its great new oriental sculpture gallery the Arthur M. Sackler Gallery.

Mr. William H. Clark, a graduate of Yale College and Harvard Law School, heads William H. Clark Associates, Inc., one of the major management consulting firms operating in the United States and Europe. He is a director and a former president of the Association of Executive Recruiting Consultants. Mr. Clark practiced law with Mudge, Stern, Williams and Tucker until he left for service in Naval Intelligence during World War II. After the war, he began working in the field of personnel, becoming National Recruitment Director of Price, Waterhouse and Co. and a principal of that company. He is married to the former Rosemary Dudley and has three children.

William Ruder is president of Ruder & Finn, Inc., one of the world's largest public relations counseling firms. He also served as Assistant Secretary of Commerce under President Kennedy and is a former Vice-Chairman of the United States Committee for the United Nations. In addition to the management of his own firm Mr. Ruder is active in civic affairs. He is on the Board of Directors of the following organizations: The National Civil Service League, the Advertising Council, Behavioral Research Laboratories and Blythedale Children's Hospital. He is a member of the Graduate Advisory Board of the City College of New York. A graduate of City College, he served as an Air Force Officer during World War II. Mr. Ruder is married to the former Helen Finn and has five children.

* * *

Dr. Sidney Shulman, noted immunologist with special interest in immunochemistry has been appointed Professor and Chairman of the Department of Microbiology effective January 1.

Dr. Shulman came to the College from the University of Buffalo School of Medicine, with which he has been associated since 1952, most recently as Professor of Immunochemistry. He is the author of more than 100 papers on protein chemistry and immunochemistry, and co-author of a textbook on biophysics. A 1944 graduate of George Washington University with a B.S. in chemistry, Dr. Shulman was awarded the Ph.D. from the University of Wisconsin in 1949. He held a Senior Research Fellowship from the National Institutes of Health from 1958 to 1962, and was
further honored by a Research Career Award from NIH, which he held from 1963 to the end of 1967.

* * *

Dr. Richard M. Friedenberg has been appointed Professor and Chairman of the Department of Radiology, effective July 1. Dr. Friedenberg comes to the College from the Albert Einstein College of Medicine, where he held the posts of Associate Clinical Professor in Radiology and Director and Chairman of the Department of Radiology, The Bronx-Lebanon Hospital Center.

He was graduated from Columbia College with a B.A. in 1946 and was awarded the M.D. by the Medical College, State University of New York, Brooklyn, in 1949.

Dr. Friedenberg, who is certified in Radiology, took his internship at Maimonides Hospital of Brooklyn in 1949-50, and held an Assistant Residency in Diagnostic Roentgenology at Bellevue Hospital in 1950-51. He was also a Fellow of the National Cancer Institute in Radiation Therapy at Bellevue in 1951-52 and a Fellow in Radiology at Columbia Presbyterian Medical Center. From 1953-55, Dr. Friedenberg was a Consultant Radiologist with the 3rd Air Force in London, England.

A welcoming reception in honor of the Class of ’71 was held by the Alumni Association on November 15 in the College Auditorium.

The program, which began at 5 P.M., included short and informal talks by former Dean J. A. W. Hetrick, Class of ’18, Dr. Leon S. Loizaux, Sr., and Dr. Leonard Paul Wershub, Class of ’27, concerning the history and traditions of the College, and by Dr. David Denker, President, and Dr. J. Frederick Eagle, Dean, concerning its present and future.

Following this, draft beer and a cold buffet were served in Hetrick Hall. Dr. Allan B. Weingold, ‘55, Associate Professor of OB-GYN at the College, was Chairman of the event.

The success of the program and the apparent enjoyment of all those who attended, including the guests of honor — the Freshman class, insured its repetition in the future.

* * *

Dr. Rachmiel Levine, Professor and Chairman of the Department of Medicine was elected president of the International Diabetes Federation. His election took place in Stockholm, this past summer.

* * *

The first pediatric care program in New York City to be conducted evenings and weekends has begun operating at the Pediatric Clinic of Metropolitan Hospital. The new program is one of the latest steps in the College’s continuing effort to make the finest quality of outpatient care available to all the patients served in its hospitals.

* * *

Cyclazocine, a new drug for the treatment of narcotic addiction, has been used with encouraging results by doctors at the College in the clinical psychiatric services of Metropolitan Hospital.

The institution is the only one in the country using cyclazocine in an experimental program in the rehabilitation of addicts. While the use of cyclazocine in narcotic addicts is recent, Dr. Alfred M. Freedman, Professor and Chairman of the Department of Psychiatry at the College, and head of the program, calls cyclazocine therapy “a promising approach.”

The investigators are in the midst of a two-year study, under a $150,000 grant from the National Institutes of Mental Health, to test the usefulness of both cyclazocine and methadone, another drug being tested in experimental rehabilitation programs.

* * *

The Department of OB-GYN at the College held its Annual Residents Day Program on November 4. Participants included Drs. Elizabeth Connell, Arthur Horowitz, William Jung, Salvatore Rini, Sanford Sall, Alexander Sedlis, Donald Sloan, and Allan Weingold. Guest speaker was Dr. Harry Prytowsky, Professor and Chairman of the Department of OB-GYN at the University of Florida School of Medicine. Dr. Martin L. Stone, Professor and Chairman of the College’s OB-GYN Department, moderated a panel on “Ovulation: Induction and Inhibition.”

* * *

Dr. Miles A. Galin, Professor and Chairman of the Department of Ophthalmology at the College, was chosen by the Joint Session of the American Academy of Ophthalmology and Otolaryngology to receive the Academy’s Award of Merit. He was given the award on October 30 in Chicago. Dr. Galin is the youngest man ever to receive the award, which was granted for presenting original work and for teaching at the academy’s annual fall meetings.

* * *

The annual 400 Club Cocktail Party was held Friday evening December 8, in the College Auditorium and Hetrick Hall. Held in honor of the 400 Club members and their guests, the gathering was attended by upwards of 375 people. In case anyone has forgotten, the 400 Club consists of alumni, faculty members, parents, and friends of New York Medical College who annually contribute a minimum of $250 or more to the College.

THE CHIRONIAN/WINTER 1967-1968
Mark L. Peisch  
Appointed  
Associate Dean  

Mark Lyons Peisch comes to his recently appointed post as Associate Dean of New York Medical College with a rich and varied background in the field of higher education.

He has had administrative and teaching experience at institutions such as Columbia, Fairleigh Dickinson, and Dartmouth. From 1960 to 1966 he served as Director of Admissions and Financial Aid at Columbia University. He also acted, from 1957 to 1960, as Director of Admissions for Columbia’s Graduate Faculties. Dr. Peisch has taught art at Dartmouth, his alma mater, and the humanities at Columbia College. He received his Ph.D. at Columbia University, and his doctoral dissertation “The Chicago School of Architecture—Early Followers of Sullivan and Wright,” was published by Random House.

Dr. Peisch’s variety of responsibilities at the College include student affairs, academic guidance, financial assistance, and, in the crucial area of admissions, he serves as Secretary to the College Admissions Committee.

Dr. Peisch firmly believes that the responsibility for admissions standards and procedures lies with those most directly involved with the students, themselves and with the subject field that they propose to study—the members of the College faculty.

“The people who are best able to identify the future doctor are doctors themselves. The Admissions Committee at New York Medical College is made up of members of its faculty. It includes doctors who have recently come here, doctors with many years experience, graduates of this school and of other medical schools, and specialists in all medical fields,” explains Dr. Peisch.

Dr. J. Frederick Eagle, Dean of the College, is Chairman of the Admissions Committee. Specifically, the Committee includes four alumni—Joseph C. Bamburg, M.D. ’56, Assistant Dean of the College and Assistant Professor of Obstetrics and Gynecology; Saverio Bentivegna, M.D. ’50, Assistant Professor, Surgery; Harold I. Kaplan, M.D. ’49, Professor, Psychiatry; Benjamin Sadock, M.D. ’59, Associate, Psychiatry.

Faculty members include Louis L. Bergmann, M.D., Professor, Anatomy; Bernard M. Brodoff, M.D., Assistant Professor, Medicine; Alvin F. Coburn, M.D., Associate Dean, Professor, Microbiology, Associate Professor, Pediatrics; Anthony Cuti, M.D., Associate Professor, Pediatrics; Isidore Danishefsky, Ph.D., Professor, Biochemistry; Mervyn Franklin, Ph.D., Associate Professor, Microbiology; Robert Goldstein, M.D., Professor, Medicine; John M. Marino, M.D., Instructor, Surgery; Samuel H. Rubin, M.D., Professor, Medicine; Louis J. Salerno, M.D., Professor, Obstetrics and Gynecology; Donald Shapiro, D.Sc., Professor (Biostatistics), Psychiatry, Professor, Preventive Medicine; Milton Terris, M.D., Professor, Preventive Medicine.

An article by Dr. Peisch concerning admissions, financial assistance, etc., will appear in the next issue of the CHIRONIAN.
In mid-1967, Dr. David Denker inaugurated what is planned as an annual custom: meetings with alumni of New York Medical College throughout the country, wherever possible, and before the year had ended he had met with, and spoken to, gatherings of alumni and their wives in Brookline, Massachusetts; Cherry Hills and Newark, N.J.; Westchester, N.Y., Los Angeles and San Francisco, Calif.; Denver, Colorado; and Long Island, N.Y.

"I personally consider the alumni of New York Medical College the most important of the institution's many publics," said Dr. Denker, "and as long as I am President, I consider it a primary duty to keep them fully informed as to their Alma Mater's present and future plans either in person when the opportunity presents itself, by mail, and most certainly, through the pages of The CHIRONIAN."

Although five of the meetings were beset by torrential day-long rains and one by a three-inch snow-fall, the attendance of alumni, and their wives, interested in hearing of their school's future from the lips of their new President, was remarkable—many of them driving over 200 miles in inclement weather to be present.

Dr. Denker's talks covered every conceivable detail of the school's present and his prognosis for the future and each were followed by a lively question and answer period that evidenced an amazing diversity of interest in their alma mater by alumni of all ages.

On the following pages are a sampling of photographs taken at the various affairs. We are sorry that space does not permit use of all the photographs.

Brookline, Mass.

The initial gathering of alumni for a series of year-long meetings in various areas of the country where Dr. Denker plans to devote as much time as possible to keeping graduates of the College completely informed as to present and future plans of the institution, was held at the home of Mr. and Mrs. Samuel B. Newman in Brookline, Massachusetts on May 7, 1967.

Despite a torrential, all-day downpour, only two of the area's alumni were unable to attend because of the weather. Dr. Denker spoke at some length to the alumni and their wives of his plans for the college and emphasized that because of their reasonably close proximity to their Alma Mater, alumni in the Massachusetts area could hopefully be expected to participate more in the College activities on a personal level.
Westchester,

Dr. and Mrs. Samuel L. Scher hosted a gathering of Westchester alumni on August 27, 1967 at their home in Mamaroneck, N.Y. Despite a heavy, daylong rain, some 40 alumni and their wives came for cocktails and dinner to meet and hear Dr. Denker who outlined the College's consideration of a new site for the medical complex.

Of primary interest to the gathering, of course, was the possibility of the relocation of the College in Westchester at Valhalla, N.Y., and the question-and-answer period that followed Dr. Denker's dissertation was primarily devoted to queries regarding that possibility.

New York
Because of the geographical impossibility of gathering New Jersey's alumni at a central point, a meeting was held at the Cherry Hills Motel for southern New Jersey and at the Robert Treat Hotel in Newark, N.J., for northern New Jersey. A tornado alert, with an accompanying rainstorm, failed to prevent some 50 alumni and their wives from attending the Cherry Hills reception on October 18 and a similar siege of rain and wind plagued the meeting on October 25 in Newark, nevertheless a similar amount of interested alumni attended.

Speaking in a similar vein at both affairs, Dr. Denker emphasized that it was his personal goal to keep all alumni fully abreast of affairs at their College and in return he hoped for their interested loyalty particularly in the area of seeking out and recommending exceptionally qualified students to New York Medical College. A lively question and answer session followed each meeting.
Southern California broke the rainy weather hazard that had haunted the gatherings with an extremely successful meeting of area alumni under the able chairmanship of Dr. James V. McNulty, '43, at the Century Plaza Hotel in Los Angeles on November 1. Well over 150 alumni and their wives attended for cocktails, dinner and dancing on a balmy, summertime evening.

Few of the Southern California alumni were aware of the projected relocation of the College until Dr. Denker outlined the full details and attendant problems facing one of three possibilities: 1) Remaining where the College is; 2) moving to upstate Westchester County at Valhalla, N.Y.; 3) removing to Queens in Long Island, N.Y.
San Francisco, California

Under the capable chairmanship of Dr. Stephen N. Rous, '56, Northern California alumni staged an equally successful welcome for Dr. Denker at the Fairmont Hotel in San Francisco on November 3. Cocktails were held in the French Room and dinner served in the Cirque Room to almost 100 alumni and their wives.

As in all the meetings, Dr. Denker urged that these affairs hopefully would serve as the springboard to formation of area alumni chapters with meetings of their own during the year culminating in an annual visit by either himself, Dr. J. Frederick Eagle, Dean, or other members of the faculty at the request of the alumni chapter itself.
Dr. Daniel E. Gelfand, '43, and his wife, were hosts at their home in Denver for a conclave of Colorado alumni and their wives on November 6. Although a three-inch snowfall and 23-degree temperatures blanketed the area, the attendance at the reception was 97 per cent.

Here, too, the possible relocation of the College was the primary topic of interest although Dr. Denker's suggestion that the alumni seek out and sponsor, if necessary, outstanding students for the College met with a prompt response from Dr. Gelfand who provided an applicant for interview at the Denver Airport the following morning.
Long Island, New York

Final informal alumni reception of the year was held on December 2 at the Brookville Country Club, Glen Head, N.Y., and the “beneficial” climate of the East provided what has become an habitual downpour. Nevertheless, almost 80 alumni and their wives from the Long Island area provided an avidly interested audience for Dr. Denker’s discussion, their interest heightened by the fact that Queens is one of the areas under consideration for relocation.
1896

Ralph I. Lloyd is retired since 1959 after a busy life devoted to Ophthalmology. He was President of the American Academy of Ophthalmology and Otology in 1942 and a Professor of Anatomy from 1908 to 1914.

1906

Alfred C. Emmel described himself as semi-retired. He's OB-GYN consultant to Mt. Vernon Hospital and has been active in practice for more than 50 years in his N.Y. area.

H. C. Duvall has been retired at 6415 Prestoncrest Lane, Dallas, Texas since 1958. He practiced in Niagara Falls, N.Y. for 52 years.

1907

C. Wadsworth Johnson is engaged in limited general practice in Mt. Vernon, N.Y. where he has been medical officer of the Fire Department for 42 years.

Remick C. Eckardt has retired from the practice of Otolaryngology. He resides at 35 Prospect West, Brooklyn, N.Y.

1908

Harlow G. Farmer, who retired from the practice of general surgery in 1953, notes: "It is surprising how fast the time goes. Keep busy at something or many things, and don't forget physical activity to keep the old machine running smoothly. We spend most of the winter in Florida and the summer on the shores of Lake Ontario. Still get a lot out of life. I'd like to know if any of my class are alive." (Hope you received our letter.)

1912

Albert G. Hulett retired from the army after World War II, during which he was the Chief of Laboratory Service in several hospitals, and decided to cease institutional and referred pathological work and concerned himself with private practice. It was devoted to the diagnosis and therapy of chronic and metabolic diseases wherein his laboratory could serve his patients only. He continues to date.

William F. Shaw retired at the age of 70. Until 1934, he was in Orthopedics and thereafter, until 1952, Mental Illness State Service, New York. He has lived in Wesley Manor, Jacksonville, Fla., ever since. It is a retirement village of about 200 persons from age 65 to almost age 100. "Our village is a choice spot with a delightful climate on the banks of St. John's River. Do a little fishing and daily sauntering. I am entirely out of touch with old time classmates to whom I send my salaams." (We sent you a note with their names and addresses.)

1914

Charles G. Buckmaster, age 85, reports he has never defected from the practice of Homeopathic Medicine. He has been active on the Medical staff of New York City Division of Veterans' Affairs since 1951. He is now a weekend gardener and interum author.

1915

R. D. Duckworth retired in 1957, spends his winters in Ponte Vedra, Fla., and summers at 15 Aspatuck Rd., Box 664, Westhampton Beach, N.Y. 11978.

Charles B. Reed is closing his private office for the practice of Radiology and is taking a part time job as Radiologist at the U.S. Veterans Hospital, Castle Point, N.Y.

1916

Arthur G. Pilch, who winters in 3200 N. E. 36th St., Ft. Lauderdale, Fla., 33308, says: "Fort Lauderdale, I believe, has the only retired Doctors' Club or Association in America. We have about 120 members and meet at the Yankee Clipper on the first Thursday in the month with time off in the summer. There are several alumni in the area; Lloyd Whitman, 16; Ed Willan, 16, is in Ormond Beach. I spend my summers in Boothbay Harbor, Me. Thirty odd years ago, I had a weak moment and bought an estate up here. Now I am trying to hold it together which isn't easy with LBJ throwing it down the drain."

Lloyd B. Whitman has completed seven years of retirement in Pompano Beach, Fla., and has enjoyed every minute of it. He mentions getting together with Arthur Pilch frequently.

1917

Jules Kranz is a retired G.P., and lives at 5161 Collins Ave., Miami Beach, Fla.

Adolph S. Kramer is retired but reports: "I am the drama and music director of The Blair Club of Silver Spring, Md." And the Blair Club Times says "thanks to Dr. Kramer and his lovely wife, Gladys, for the opportunity to get to know them better and to take advantage of the cultural evenings the Drama Group, under his stimulating background of knowledge, furnished so many of us."

1918

A. Frederick McGourty retired in 1964 and is going to spend the winter in Switzerland with his daughter and son-in-law, Dr. Jacques Lagier, who is an internist in Geneva.

1920

Harold Foster notes that he began as a GP in 1923 and drifted into Otolaryngology the difficult way... was active on the staff of Flower, Metropolitan, N.Y. Ophthalmic, Flower-Fifth and Queens

THE CHIRONIAN/WINTER 1967-1968
NOTES

1921

Helen A. Paul Mirenda has been retired from private practice for three years but is working as a part-time clinician for the New York City Department of Health.

Joseph Kasnetz, specializing in Otolaryngology, is now living at 1807 Ditmars Boulevard, Brooklyn, N.Y.

David Harrison has just moved to 1430 S. Bayshore Drive, Miami, Fla. 33131.

1926

Benjamin Silberg has specialized in Pediatrics with a sub-specialty of Pediatric Allergy for 40 years and only recently retired from his position as Associate Clinical Professor at New York Postgraduate and University Hospital. His son, Steven, is interested in a medical career.

1927

William R. Rich has spent more than 18 years with the Dept. of Mental Hygiene in California. A resident of Camarillo, he is active in Ventura Symphony, chamber music and tennis. He would like to hear from his classmates whenever they are in the Los Angeles area.

Joseph W. Hoffman reports he has not been in active practice since May, 1966.

1928

Presently Murray Bergman is Chief of Mental Hygiene Clinic of Veterans Administration Outpatient Service at 39 State St., Rochester, N.Y. He also is secretary-treasurer of the American Psychiatric Association and Delegate to the APA Assembly — all since 1952.

Samuel Steinholtz, after 39 years with the Department of Hospitals in New York City, retired in July of 1967. He plans to move to Texas in the very near future and this is to remind him to forward us his new address.

Louis R. Lang is specializing in Ophthalmology in Silver Spring, Md.

Louis J. Goldstein has retired from Veterans’ Administration and is practicing Otolaryngology at the Revenon Diagnosti Center of the Albert Einstein College Hospital.

1929

Reuben B. Silverstein is in the practice of internal medicine and is a Fellow of FACAA, N.Y. Cardiological Society and the American Geriatric Society.

Alfred E. Passera is currently Director of Medicine at St. John’s Queens Hospital, and Astoria General Hospital and Consultant in Medicine at Queens Hospital Center.

Harold Friedlander is in General Practice in Laurelton, N.Y.

Oscar S. Koenig is in the practice of General Medicine and also on the Faculty at the University of Arizona.

1930

Milton H. Firestone is full time with the Los Angeles State Mental Hygiene Clinic at Los Angeles, Calif.

Salvatore LaCorte is Director of Radiology & Nuclear Medicine at Stamford Hospital, Stamford, Conn. and a consultant in Radiology at Morris Bernstein, Beth Israel Medical Center.

Rebecca Liswood’s specialty is in marriage and pre-marital counseling. She is adjunct Professor at Adelphi University, teaching marriage and child care and lecturer to physicians and laymen on the subject of Sexual Harmony in Marriage. She is author of “A Marriage Doctor Speaks Her Mind About Sex” and “First Aid for the Happy Marriage”. She has authored many articles for magazines and newspapers on “Building a Happy Marriage” and “Sex in Marriage” as well as “Healthy Sex Education for the Single Adult”. She makes frequent appearances on radio and TV discussing “A Healthy Understanding of Sex”. She is also Executive Director of the Marriage Counseling Service of Greater NY.

Joseph Schwartzman is Clinical Professor of Pediatrics and attending Pediatrician at Metropolitan Hospital. He is a Fellow of the Academy of Pediatrics.

Benjamin A. Gilbert has been appointed medical director by the NY Port Authority of the World Trade Center in lower Manhattan.

Irwin Lubowe has written the chapter “O.T.C. anti-Seborrheic Preparations” which appears in the Handbook of non-Prescription drugs published by the American Pharmaceutical Association in September, 1967.
Benjamin A. Schantz, who specializes in administrative Psychiatry, is Assistant Director, Middletown State Hospital, N. Y.

H. L. Wollenweber has been a Clinical Pathologist for 20 years and is President of Laboratory Management Service, Inc., in Baltimore, Md. and is currently Director of the Baltimore Associated Schools of Medical Technology, a post he has held since 1945. He is consulting pathologist to Hartford Memorial and Maryland General Hospitals; Hynson, Westcott and Dunning, Inc., and Pharmacologic Associates Inc.

George A. Bochow cruised to Bermuda — Sept. 30-Oct. 6 — for his 25th wedding anniversary. He is a grand-parent of one; his oldest son, George Jr., is a senior at NYU Uptown; Alyson is at Yale School of Nursing, Michael is at Cortland State (Physical Education), Brian is a senior at Mt. Vernon High School and Gregory is a freshman at the same high school.

1931

Morris W. Greenberg says he received his F.A.C.S. in Chicago on Oct. 5, 1967. "Sorry 'Uncle Joe' Fobes was not around for the usual cocktails at these conventions for his post-graduates."

George H. Stein and Bella Singer are both in Radiology and passed their 37th wedding anniversary on Sept. 7, 1967. Their son, David, is an Asst. Professor in the Dept. of Psychiatry at Einstein Medical Center. They have two grandchildren by their daughter and are considering partial retirement soon.

Henry W. Eifelder writes that due to increasing disability due to an old fracture of 6,78 Cerv. and dislocation of several lumbar vert., he has been advised to quit active practice and retire to the sunny South. To this end, he has sold his home in Syosset, L. I., and moved to 855 Painted Bunting Lane, Vero Beach, Fla. 32960. "Not making daily hospital rounds and seeing office patients is still needing some getting used to, but we are learning fast. Plan to do some medical writing so as not to become absolutely stale. All organizations have made me either a Life or Emeritus member, so I still receive and read the various publications. Best to my class mates and call when down this way."

Charles Hertzman is presently assistant chief of Medical Service at VAH, Ft. Wayne, Ind. Herman Rudensky, a classmate, his chief of Medical Service there.

The Governor of Indiana and 500 of his friends joined in honoring Fred F. Shepard for 35 years of service to the College Corner and Oxford area. The "This is your Life" program was held in the Miami University Center and concluded a "Fred Shepard Week" which also marked his 64th birthday.

Leo Birnbaum retired from the Veterans Administration two years ago as chief of the Psychiatry-Neurology Unit and is now in private practice of Psychiatry in Scotch Plains, N. J. He became a Life Fellow of the American Psychiatric Association last May.

Ophthalmologist Henry T. Gaynin retired last June after 30 years of NY city service. Since 1952 he has been supervising Ophthalmologist and Director of Optimal Services Administration. He has been appointed Asst. Director and Administrator, Dept. of Ophthalmology at the College.

Moe A. Goldberg is Chief, Psychiatry and Neurology Service, VA Hospital, at 24th St., and First Ave., NYC. He is Asst. Clinical Professor of Psychiatry at NYU-Bellevue Medical Center and is a Fellow of the American Psychiatric Assn., and the American Assn. for the Advancement of Science.

Theodore Rothman is at the present time editing a book titled, "Changing Patterns in Psychiatric Care", which will have an introduction written by Dr. Milton Greenblatt. The book will consist of papers collected from a Study Group of the American College of Neuropsychopharmacology, with grants from the Rush Research Foundation and the National Institute of Mental Health.

Marcus P. Rosenblum was recently appointed Assistant Professor of Psychiatry at Jefferson Medical College, Philadelphia and is continuing as Chief of Staff of the VA Hospital in Coatesville, Pa.

Roswell Lowry is Chief of the Physical Medicine and Rehabilitation Service at the Cleveland, Ohio VA Hospital and past President of the Ohio Society of PM&R. He is a member of the Disaster and Relief Committee of the Cleveland Academy of Medicine and is also radio officer for the 10th District-Cleveland Civil Defense Radio Amateur Civil Emergency Service. Fellow hams can call him on K8ZBL. His most recent publication is the "Durability of Lower Extremity Prostheses".

Irvine Pine is in the private practice of psychiatry in Columbus, O. He is clinical Associate Professor at the Ohio State University College of Medicine and is currently editor of the newsletter of the Ohio Psychiatric Association and the Neuropsychiatric Association, Central Ohio. He is also a Fellow of the American Psychiatric Assn.

Joseph Bloom is medical director of the Reserve Mining Company, the largest taconite operation in the world. One son, Dr. Harvey M. Bloom, '62, is in practice in San Diego, Calif. and a second, Dr. Stephen Bloom is interning at St. Mary's Hospital in Duluth, Minn. He enters the Air Corps next year. His daughter, Joan, is getting married this December and as for himself, his next step is retirement.

Max Gratz is in the practice of internal medicine and gastroenterology in Miami Beach, Fla.

Michael Rosen has been Neuropsychiatrist with the Veterans Administration in Brooklyn, N. Y., since 1936.

Michael J. Fisher is Attending-in-charge of Service, Dept. of Surgery, Division of Proctology, Maimonides Medical Center in Brooklyn, N. Y. He is also an instructor in Surgery at Downstate Medical Center, Univ. of the State of N. Y. and is Associate Attending at Caledonian Hospital in Brooklyn.

Alexander Richman has been appointed Associate Clinical Professor of Medicine at the Mt. Sinai School of Medicine in NYC.

Ben E. Landess is medical director of the Jamaica Medical Group in New York.

1933

Herman B. Zurrav specializes in internal medicine and peripheral vascular disease. He is medical director of the Hebrew Hospital for the Chronic Sick in the Bronx, N. Y.

James S. Hammerling is Professor and Head of the Department of Otolaryngology at the Dalhousie University Medical College since 1963.

Samuel M. Tarnower now is clinical Assistant Professor of Neurology at the Albany Medical College.

Jacob Bleiberg is attending Dermatologist at Newark Beth Israel and Consultant Dermatologist at the Newark, N. J. Eye and Ear Infirmary and the Kessler Institute in West Orange. He is a Diplomate of the American Board of Dermatology and a Fellow of the American Academy of Dermatology plus his membership in the American Academy of Allergy.

The Chironian/Winter 1967-1968
“Conducting my general practice at my first and only office (3170-34th St., Long Island City, N. Y.) since January, 1937,” comes the word from Nathan Drezer.

Attending in Pediatrics at Muhlenberg Hospital in N. J., is Hayward F. Day who is also consultant in Pediatrics at John S. Runnels Hospital as well as Pediatrician to Plainfield, N. J. public schools.

William Kropt wants all to know that the class of ’33 will celebrate its 35th anniversary at a gala reception and dinner dance on Saturday evening, May 25, 1968, at the St. Moritz Hotel in New York City. He says: “It will be an outstanding success since 100% class attendance has been assured.”

John B. Barnett is specializing in cardiology at 1320 South 19th St., Birmingham, Ala. He did 29 months in the army leaving as a Captain in ’46. He was chief of the cardiovascular section, Billings General Hospital in 1943 and became Asst. Professor of Medicine—Heart Station, Medical College of Alabama in 1946. He received post-doctoral fellowships in cardiology from the latter in 1946 and from Massachusetts General Hospital in Boston in 1940-41. He has three children.

1934

Sidney E. Wanderman is assistant Professor in Surgery (Proctology) at the College.

Have been promoted, says Joseph Hahn, to Associate Professor of Clinical Dermatology, New York University Postgraduate Medical School.

Edward Mancone outlines a pretty busy life in Little Ferry, N. J. He’s Associate Director, Dept. of General Practice, Hackensack, N. J., Hospital and member of the Medical Advisory Board of the same institution. Also: police surgeon, fire department surgeon, school physician and advisor to the Board of Health of the town. Also is a past-president of the local Rotary. Spent World War II with an evacuation hospital working with the Third Army and received 5 bronze stars for being in the combat area (not my choice, but who asked me?)

Harvey Gollance reports he is Deputy Commissioner of Hospitals of New York City and the proud parent of one son, three daughters and two sons-in-law. Says he: “My son, Bob, Harvard ’58 and P&S ’62, is completing his overseas tour of duty with the Army as Chief of Ophthalmology of the 121st Evacuation Hospital in Korea. One daughter is completing her Masters in radiation physics at Columbia, one is completing her Masters in Social Work at Columbia and one is a senior in college. One son-in-law is an interne and the other a lawyer. I am almost out of the woods in supporting the institutions of higher learning in this area.”

1935

Lawrence W. Buonocore has been in Medford, Ore., since 1936. He was a major in the second World War from 1942-46 and has been in general practice since. On the staff of Providence and Rogue Valley Memorial Hospitals, has a family of 5 children and the same amount of grandchildren.

Martin M. Fisher, Clinical Asst. Profesor of Medicine at the College, and classmate Arthur M. Michele, Professor and Director of the Dept. of Orthodontics have jointly published a paper, “Thrombophlebitis, Fractured Hip and Pulmonary Embolisms”.

1936

John M. Silberblatt has just returned from a trip to the middle East . . . John is Asst. Clinical Professor of Urology at NYU-Bellevue Medical Center and Chief of Urology at Doctors Hospital, Freeport, N.Y.

Paul S. Ingrassia was elected President of the American Cancer Society State Division for 1967-68.

“Everything is the same except older.”

And that’s from Willard H. Lemmer.

Geralding B. Branch notes that she is District Health Officer, Los Angeles County Health Dept., has one daughter who is married and has two daughters and one son who is in the third year of dentistry.

1937

William S. Gartner reports that he and classmate Benedict De Phillips played handball and did some swimming at the Madison Avenue Presbyterian while they were students at the College. “I understand Benny is very busy with his practice and the various clinics he conducts in Newark, N.J. As for myself, I’m so happy when I can play handball and tennis and go swimming. This activity once or twice a week, keeps me in good condition. I still feel that men stop playing too soon.”

“Lydia Verborg Shaughnessy,” writes Lucy D. Ozarin, “was my partner all through medical school, came east this summer for the first time in 30 years and we had a reunion on the East Coast. Lydia’s husband, Weldon, and her college-age daughter, Ruth, were with her.”

It’s now Solomon D. Klotz, author. He has written a book entitled “A Guide to Modern Medical Care” that will be published by Charles Scribner’s Sons, N.Y., in November, 1967. It is based a good deal on his experiences in private practice over the last 30 years. He would be happy to have comments on it from his fellow alumni. Write to him at 303 E. Par Ave., Orlando, Fla.

A. John Bambara is medical director of Somerset County Guidance Center, Somerville, N.J.

A resident of Vineland, N.J., for the past 20 years, Gaetano A. Mascara has also been school physician for the same in two decades. Also in part time industrial medicine with Owens Illinois. Dr. Rosielle, ’32, is his neighbor and they see each other regularly. Dr. Fenichel is Radiologist at Newcomb Hospital and they also meet regularly. “Still love general practice,” he says.

William Rubin is Chairman of the Dept. of Ophthalmology at Middlesex General Hospital, N.J., and received the Barraquer Award, 1966 (contribution to medicine and surgery through cinematography). “Reverse Prism in the Treatment of Strabismus and Amblyopia.”

Samuel A. Greenberg writes thusly: General Practitioner specializing in psychotherapy (individual and group) I do music and art therapy. Developed a series of visual aids (oil paintings) over the past 17 yrs., from Birth to Rebirth. I use these in the office and public lectures for psychoanalytic and religious (inner reality, creative, mystical) orientation . . . i.e. Theopsychosophy.

I founded the institute of Theopsychosophy (integration of psychology and religion (inner reality, creative core, soul, essence of Being) in the one Being, or experience. The Being in relationships to the self, the other and The Totality.

I founded the Assn. Feeling Truth and Living It (AFTLI Inc.) in 1961. It is an educational organization on the Biosocial Human Being, chartered by the State and Federal Gov’t. It is a self help and self health organization. It is non-profit. Three psychiatrists and two ministers besides myself are on the advisory board. The members have developed various techniques to get at the
creative core of the members and guests. At the meetings one is given the chance and place to be free and spontaneous in expressing oneself, except the physical. Members and guests are from all the walks of life, with ages from 13 to 70 yrs. It has a training program, experimentally, for discussion group leaders. They have developed the DIG (discussion in group), where each is free to dig at each other in regard to the topic of the evening. Many guests and members are in treatment with many therapists, group and private. They take some of the ideas, techniques and activation back to their own therapists and groups; this aids in catalyzing their creative core. Discharged people from mental hospitals are attending. The members go out on demonstrations into colleges, schools, industry, churches, etc. PEOPLE ARE ALLOWED TO BE.

AFTLI is used as an extension of therapy for patients in treatment and an have never been in the formal therapeutic setting . . . a laboratory for life.

I work with the patients to have them evolve to the feeling of responsibility for their fellow man and want to help in the community project . . . a movement towards Caritas, or Pauline love. Can’t get the psychiatrists to feel responsible for the community in the project: they are “stuck” in their office ivory tower, and with all the benefits that go with it.

Anybody want to come down and give us a hand . . . lots of fun and soul satisfaction especially. Contact me, or the organization directly, it’s listed in the Brooklyn phone book.”

1938

Joseph C. Messina is chief of Pediatric Surgery at Coney Island, N.Y. Hospital and a Diplomate of the American Board of Surgery.

In general practice and proctology is Louis J. Fazio. He is also Associate Attending surgeon, Yonkers General Hospital and attending physician in the General Practice Division of the same hospital.

Pasquale Montesano is chief of staff of St. Luke’s Memorial Hospital Center in 1964 where he had two classmates on his staff.

Ed Gendel currently polling classmates for their suggestions as to where, when and how to celebrate their 30th anniversary. The 25th was a memorable whining-ding and Ed wants to even outdo that affair. So get your answer in now, soon, today!

John J. Hamley is chief of staff and senior attending in the Dept. of Gastroenterology at Alexian Brothers Hospital, Elizabeth, N.J.

Meyer E. Golob ranks as Assistant Clinical Professor of Psychiatry at the Mt. Sinai School of Medicine, NYC.

Benjamin M. Shenker discontinued general practice in June of 1965 and studied at the University of Vermont as a trainee in Rheumatology, Dept. of Medicine, 1965-66. Now in private practice of rheumatology, 1966 to present in Middletown, Conn.

1939

Paul George Cayaves takes typewriter in hand to note: “I have been in private practice in Salisbury, Md., for the past 13 years, prior to which I had spent five years in practice up in St. Marys, Pa., after completing my surgical residency at the Metropolitan Hospital in 1949. Life has been good to my wife, Amy, and me here in Salisbury, until her death on Sept. 4, 1966, following cardiac surgery for rheumatic heart disease a few days before. We have had 25 happy years of married life together for which I am deeply grateful. I have enjoyed each issue of the Chironian very much, in keeping one informed of the activities and changes going on at the College. It would be nice, however, to learn about the whereabouts and doings of the other members of the class and perhaps this next issue will do just that. My best to all.”

Bernard Rothbard is Medical Director of the United Wire Metal and Machine Medical Center. We are opening a new medical building in the near future at 10 East 15th St., NYC. Several of our alumni are at the center. His oldest son, Malcolm Jay, is a 2nd year resident in OB-GYN at Flower and his youngest son, Richard Dale, is a 3rd year student at Downstate Medical School. He sends regards to all his friends and classmates.

J. Leonard Greif has been practicing in Dover, N.J., since 1950. He is Chief of ENT Dept. at Dover Gen’l Hospital and St. Clare’s Hospital in Denville, N.J. A member of the executive committee of the Morris County Medical Society, he will be President of the medical staff at Dover for the next two years. He is involved in numerous civic activities. Is FACS, FICS and DAB. Sends his best to all.

1940

T. Keery Martin is practicing Psychiatry in San Diego, Calif.

John P. Cannis informs that he is Chief of the Division of General Surgery but didn’t tell us where.

Frank L. L. Pintauro is in General Practice on the medical staff of Pelham Bay General Hospital, Bronx, N. Y. And he did a little groundwork on some classmates: Peter J. Nardi does anesthesia at the same hospital as well as GP; Fidele Bonito is a staff member there and is a GP; and Michael Di Giacomo is a GP, licensee and member of the medical board at the same institution.

Clifford J. Tichenor is an Attending in Pediatrics at Orange Memorial Orthopedic Hospital and St. Barnabas in South Orange, N.J. Cliff, Jr. (19) is a junior at Wesleyan U. and Charlotte (18) is a freshman at Vanderbilt, majoring in nursing. Cliff Jr., and Lance (16) were champion swimmers in college and high school.

In General Practice is Ardw Ameduri in Utica, N.Y. and he brings up a good point for all classes: “The class of ’40 seems to be quite remiss in submitting news notes to the Chironian. We once had a secretary—where oh where can he be? At the 25th reunion, some of us spoke about future get-togethers but these seem to have fallen by the wayside. Can’t we start something with this inquiry? (If Dr. Ameduri will contact us at the Alumni office we’ll be glad to help). Strongly suggest that interested class members make known their desires to Paul F. Scheffels at the Alumni office without delay. Perhaps we can scare up a meeting for the 1968 graduation. I, for one, am particularly interested. Our #1 son is a member of the class of 1968 and, of course, we plan to be around for the festivities, Sally— I’m sure most of the class of 1940 will remember her—and I would like my classmates to be around when the Class of 1968 graduates. Let’s not wait for the ‘Last Roundup’ before renewing old acquaintances. We would be very happy to greet old friends in Utica, N.Y. (1208 State St.) at anytime, with or without previous notices. If you hesitate (but don’t) writing to the Alumni office, drop me a line.”

1941

Col. Harold G. Stacy has been in the Canal Zone since January, 1966, as Chief, Medical Support and Research
Capt. Edward M. Wurzel retired from the Navy on Sept. 1, 1967. His last duty was as Director of the Aero-Space Medical Research Dept. at the Naval Air Development Center, Johnsville, Pa. Now the Executive Director of the American Association of Medical Clinics. Married to the former Mary Veach who worked in the Fifth Ave. Hospital Admitting Office briefly in 1938. They have six sons, the oldest is in his fourth year in a Jesuit Seminary, majoring in Biochemistry at Boston U.; Second son is a soph at Brown U.; third is a senior in high school and the youngest three boys (triplets!) are freshmen in high school. He would love to hear from classmates.

V. Charles Ancona is now attending physician at St. Clare's Hospital in N. Y. Former Director, Dept. of Medicine, St. Clare's Hospital.

B. Bruce Alicandri is Senior Attending Radiologist, Mercy Hospital, Springfield, Mass. He is a Fellow of the American College of Radiology and on the American Board of Radiology, 1952.

Living for the last four years in El Vigia, Ponce, Puerto Rico is Victor G. Thompson, "My wife and I thoroughly enjoy the climate and the people on this beautiful island. Would like to see any of my classmates when they come to Ponce."

Joseph M. Wool specializes in internal medicine in New London, Conn.

William H. Hewes is enjoying a busy practice in Pediatrics, a busy life "and doing quite a bit of traveling around the world, hunting in Alaska, fishing in Bahamas and Jamaica. This is a fine place to practice and if anyone in Pediatrics is interested in getting out of the 'polluted' city life to our fresh air in Michigan, we would welcome them with open arms. Fourteen lakes within 14 minutes, skiing, hunting, fishing and the relaxing 'good life' of this fine college town. Best Regards to all."

John G. Bushman airmails from Bellevue, Ohio that he is President-elect of the Sandusky County Medical Society and Chief of the Anesthesia Dept., Bellevue Hospital, Says he enjoyed summer sailing on the Great Lakes, swimming in his pool and trying to unwind on the golf course. "Come visit us — the 'Indians' are peaceful again."

1944

Martin Nissel holds the following titles: Associate Radiologist, Boston City Hospital; Associate, Radiation Therapy, University Hospital, Boston U. Medical Center; Assistant Professor of Radiology, Boston U. School of Medicine.

1945

Paul S. Pizzo, 662 Wethersfield Ave., Hartford, Conn., is in General Practice.

John J. Reilly has been practicing Orthopaedic Surgery in Elizabeth, N. J., for the past 15 years. Certified by the American Board of Orthopaedic Surgery in 1955 and had postgraduate training at St. Luke's, NYC. Seven children, the youngest (8), the oldest (20), five girls, two boys. Associated in practice with Donald Holtzman at 222 Elizabeth Ave., Elizabeth, N. J.

Jane C. Wright, Associate Dean at the College, is coordinator for the New York Metropolitan Regional Medical Program at the College. She will serve as consultant and advisor to hospitals and health agencies interested in developing cooperative arrangements for continuing education of health professionals, development of fully equipped facilities for diagnosis and treatment, research into more effective and economical delivery of health care and training of supportive health manpower for the care of patients with heart disease, cancer, stroke, Diabetes Mellitus and renal disease. The area served by the Metropolitan program includes the five counties of New York City, Westchester, Orange, Putnam and Rockland, Nassau and Suffolk Counties.

1946

Theodore R. Brand is specializing in Pathology. His address is 260 Blueberry Hill Road, Longmeadow, Mass. 01106. An interesting note from Stephen A. Chilian, Jr., whose specialty was previously Anesthesiology but is now: The Skin And Its Contents. He's at the Prairie County Clinic, Terry, Montana 59349. "Unlike most physicians who do general practice for awhile, then take a residency, then go to a specialty, I practiced Anesthesiology after finishing my residency, for 13 years. I became very dissatisfied with this because of lack of contact with people, and decided that I would change my entire way of living and move out here where physicians are very badly needed. The year of surgical training which I had prior to the Anesthesiology has been extremely valuable to me, because a general practitioner — isolated as I am out here and entirely alone in a large western county — must do everything from Surgery to Psychiatry. I am very happy to be out here however, living a relatively simple life with a great deal of hunting available and with many good friends among the extremely fine people who live in the west. Gladys is well and my four boys are divided as follows: Stephen, the oldest, is 21 and attending Eastern Montana College in Billings; Peter, the second, is now 19, a pre-med junior at Stanford (I am very proud of him, he is at Stanford on a scholarship); Dick, the third, will be 17 about the time the Chirion comes out and is a senior in high school and Bill, the youngest is 15 and a high school sophomore. I would be happy to hear from any of my classmates or any of my friends at the school or practicing in the general area. If any of you are hunters, let me invite you out here. We have wonderful antelope and deer hunting and the grouse shooting is superlative. I can also show you scenery which is so beautiful — in the badlands (near here) that it can be surpassed by only the Grand Canyon of the Yellowstone. Sincerely, Steve."

With the closing of the Cornell service at Bellevue, Leonard Biel, Jr., was appointed as Associate Visiting Surgeon on the NYU service. He is Consultant Urologist at the N. Y. Veterans Administration Regional Office, Attending Urologist at the N. Y. VA Hospital and the Hospital for Joint Diseases and continues as an Assistant Attending at Mt. Sinai. He was certified by the American Board of Urology in 1960 and is a Fellow of the American College of Surgeons.

Martin F. McGowan is in the private practice of internal medicine in Scarsdale. He is President of the Medical Board of Union Hospital; President of the Bronx Catholic Physicians Guild and University Physician at Fordham U.
1947

R. H. Hamilton is in the private practice of Radiology and says “I neither publish nor perish”. Wife and three children.

Retired from the Navy as a Captain on June 30, reports William C. Trier and came to the Dept. of Medicine, U. of North Carolina, as an Assistant Professor in the plastic surgery division of the Dept. of Surgery. His older son, Bill, is a freshman at Chapel Hill High School.

Marvin L. Kolkin and his wife, Caryl, thoroughly enjoyed themselves at the 20th reunion and look forward to meeting again at the 25th. “It was a pleasure seeing classmates looking so ‘well preserved.’ ”

Paul Lazar has two boys, 13 and 10. He’s an Assistant Professor of Dermatology at the Northwestern U. Medical School; Attending Dermatologist at Passavant - Memorial Hospital, Highland Park, Ill.; Hospital and VA Research Hospital, Chicago; representative to scientific exhibits, Dermatology Section, AMA; and on scientific exhibits committee for American Academy of Dermatology.

Donald Gribetz is attending Pediatrician at Mt. Sinai Hospital and was recently appointed Clinical Professor of Pediatrics at the new Mt. Sinai School of Medicine.

Sylvia Kosovsky Fried is in the fulltime private practice of Pediatrics and has a 17 year old daughter, 15 year old son and 7 year old daughter.

Thomas F. Sullivan lists his specialty as Orthopaedic Surgery.

GP Richard S. Colfax notes he has six children, ages 17 to 6, with two boys, one at each end and all growing up fast.

Jerrold L. Wheaton is a Colonel in the USAF, MC, whose specialty is preventive medicine. He writes: “This is a definitive treatment general hospital of a permanent nature located on a peninsula that forms the Bay of Cam Ranh. It is one of the truly delightful and scenic coastlines of the world and if it were not for the current unpleasantness, would probably be labeled as the Riviera of Southeast Asia. We have 500 beds in permanent air conditioned structures and a staff representing every specialty, including neurology and neurosurgery. Our patient population averages 385 per day with 70% representing the surgical specialties, 25% representing the medical specialties, and 5% in the neuropsychiatric category. Few of the latter except the absolute psychotic are treated as in-patients. A future change in air-evacuation policies in the theatre will probably make this hospital the exit point from Vietnam for the majority of those patients designated for further hospitalization in the U.S. We have developed a comprehensive preventive medicine program for the indigenous population of the area (42,000) located on about 332 square kilometers. This includes a method of recording immunizations and treatments in Vietnamese hopefully may be turned over to local and English to start a record file that Ministry of Health officials for continuation following our withdrawal. In conjunction with this effort we have been teaching courses in basic sanitation and village hygiene. The popularity of these courses is best illustrated by the enrollment in the last class which started with 14 and finally graduated 56 after an additional week of instruction. In addition, we provide specialty consultation for the other USAF medical facilities in southeast Asia, acting in the true sense as a referral hospital. We also supply “circuit rider” specialty support for the nine outlying bases, but instead of the horse and buggy, our modern circuit riders use the Caribou, a short field landing aircraft. It is surprisingly simple to practice academic medicine, to stimulate local research and to motivate young staff members to submit their interesting clinical material for publication even though the location is labeled a combat zone and the staff members on their trips become as used to the sounds peculiar to the local situation as they were to the street traffic sounds outside their respective stateside windows.”

1948

Enjoying full time practice of psychiatry and child psychiatry, says Robert Selow who is also Asst. Clinical Professor of Psychiatry at UCLA School of Medicine. He has been appointed to Public Information Committee of the American Psychiatric Association and to chairmanship of the Publicity Committee of the American Society for adolescent psychiatry.

Miguel Figueroa, Jr., plans to attend the 20th anniversary reunion next June. And says he is hoping to entice Norman Nash, from the Miami area, to attend also. Hope many more will get together, particularly the members of the old “Boca-Chica Club.”

From Alex Sahagian-Edwards comes news that he continues as an Associate Attending Physician at the Francis Delafield Hospital, N.Y.C. and Assistant Medical Director of Ayerst Laboratories. He is active with Project Hope and will be going to Ceylon as a rotating physician in 1968.

Appointed chief of the Department of Ophthalmology at Pascack Valley Hospital, Westwood, N. J., in August, 1967 was S. L. Jukofsky.

William R. Thompson of 1640 Dartmouth Lane, Deerfield, Ill. 60015 sends this along: He is: Director, Medical Education, Mercy Hospital and Medical Center, Chicago, Illinois; Assistant Clinical Professor of Medicine, Stritch School of Medicine, Loyola University; Attending in Medicine, Cook County Hospital, Chicago; Chief, Pulmonary Laboratory and Inhalation Therapy Service, Mercy Hospital, Chicago; and Project Director, United States Public Health Service Grant, “Establishment of the Office of Cancer Coordinator.”

Richard H. Lange notes that he is President of the Staff at Ellis Hospital, Schenectady, N. Y. and Chief of Section, Nuclear Medicine, Dept. of Medicine at the same hospital; also Assistant attending in Medicine at Ellis and St. Clare’s Hospitals. He is active in the American Cancer Society and presently is serving as Chairman of the Professional Education Committee for the New York State Division; a member of the Executive Committee and the Board of Directors of the same division of the Society. In December, 1966, he spent a very interesting time as the only physician in Nome, Alaska at the Maynard McDougall Memorial Hospital caring mainly for Eskimos at a division Hospital of the Methodist Church.

1949

Clemens E. Prokesch is practicing internal medicine in New London, Conn., and is on the attending staff at the Lawrence and Memorial Hospital. His wife, Dr. Jeanne Chase Prokesch, who formerly taught bacteriology, immunology and parasitology at the College (to classes after his) is now an associate professor at Connecticut College for Women. “My two sons, Richard, 15½ and Steven, 14, are students at Deerfield Academy. My 10-year-old daughter attends local elementary school. I have
devoted most of my spare time to my hobby of philately. Consequently, I have been President of the Thames Stamp Club, an old and local philatelic organization, for the past eight years. This year we will hold a philatelic exhibition in New London. Otherwise, I have been quite busy and between medicine, family and hobbies, I have no time to get into mischief."

Eugene T. Hupalowsky is at the Silver Hill Foundation in New London where he is present Clinical Director of this treatment center for emotional disorders.

Specialty is Dermatology and with the Permanente Medical Group for 10 years. So writes Edward H. Ferguson. Married to classmate Katherine Gardner and have four children, two boys and two girls. Did H&P's two different days for three hours each day. "I am trying to get involved in clinics for 'Hippies' in my free time. There is a high incidence of communicable disease among these dissatisfied dropouts."

The Chironian/Winter 1967-1968
Dr. Wershub has compiled a remarkable chronicle of professional progress since 1860, the year the New York Medical College, then known as the Homeopathic Medical College of the State of New York in the City of New York, was opened. Initially headed by the literary William Cullen Bryant, son and grandson of physicians, the institution developed as part of the surge of homeopathy which reached its zenith near the turn of the present century. Today there are several other accredited medical schools which also had their origin in this outmoded sectarian system of practice. In retrospect, the homeopath’s brake on bloodletting and the excessive use of drugs in the nineteenth century was a salutory influence. The romantic and at times stormy aspects of that era are well told in this book.

Dedicated to the alumni and faculty of the New York Medical College, this volume traces the development of a small medical school located at Twentieth Street and Third Avenue, New York City, its subsequent moves uptown, and its more recent expansion into a major medical center in the metropolis. Inherent to the growth of this venerable facility are many changes in therapy, modes of instruction, social and economic forces that have influenced American medicine during the past century. Readable and well-illustrated, the book contains 18 chapters, a bibliography, name and subject index.

F.R., American Journal of Medical Sciences, Vol 254 #4, October, 1967

The Homeopathic Medical College of the State of New York received its charter from the State Legislature in 1860. The corporate name was subsequently changed five times, and is today the New York Medical College, Flower and Fifth Avenue Hospitals. This book is the colorful record of its progress during the past century. Interestingly and authentically written, and illustrated by 42 photographs, this book not only is the carefully researched history of an important institution, but is a work that makes a valuable contribution to the general history of medicine.

Of interest perhaps to surgeons familiar with the New York medical Community is this history of the New York Medical College Flower and Fifth Avenue Hospitals. The book is a combination of medical history and philosophy and is suggested for medical historians, alumni of the New York Medical College and medical educators.

For Alumni who have not yet taken advantage of the special reduced publication cost price of $4.95 (the book retails for $8.75):
